Classification	Internal Knowledge Base
Document Id	NC-ESC-001
Document Type	Escalation Policy

1. Purpose

This policy defines when a customer-support case must move from normal handling to specialist or incident-level intervention.

2. Priority Levels

Priority is based on customer impact, business impact, urgency, security risk, and recurrence. A single severe customer case can require escalation even when overall volume is low.

• Low: normal support workflow.

• Medium: specialist review or SLA monitoring required.

• High: significant customer impact or unresolved operational issue.

• Critical: broad service impact, security concern, or severe business risk.

3. Immediate Escalation

Escalate immediately for suspected security compromise, broad authentication outage, unresolved high-value payment discrepancy, repeated duplicate charges, or a service incident affecting many customers.

4. Payment Incidents

A spike in Payment Gateway timeouts should be correlated with payment failures, refund complaints, and subscription mismatches. If the pattern exceeds normal operational thresholds, create or associate an incident.

5. Required Escalation Context

Every escalation should contain customer/ticket identifiers, category, intent, urgency, relevant entities, timeline, attempted actions, retrieved knowledge, and supporting evidence.

6. Resolution and Closure

An escalated case may be closed only after the responsible team confirms resolution and the customer-facing status is updated. The resolution should be preserved as historical support knowledge for future retrieval.
