Document Type	Policy

1. Purpose

This policy defines how NovaCare Technologies handles refunds for NovaCare Premium, NovaCare Basic, and NovaCare Business subscriptions and related purchases. The policy is designed to give support agents a consistent refund decision path.

2. Refund Eligibility

Customers may request a refund for duplicate payments, confirmed failed transactions that were captured, unauthorized charges, and qualifying subscription cancellations. A payment that is still pending is not treated as a refundable completed transaction until the payment status is confirmed.

• Duplicate payment: eligible after transaction verification.

• Failed payment captured by the Payment Gateway: eligible after settlement status is confirmed.

• Unauthorized payment: route to the account-security workflow and preserve transaction evidence.

• Subscription cancellation: refund eligibility depends on the subscription plan and cancellation timing.

3. Refund Workflow

Support agents must first verify the customer account, transaction ID, payment status, product, amount, and timestamp. If the Payment Gateway reports a timeout but the transaction status is unknown, the agent must not promise an immediate refund. The payment status must be reconciled first.

• Verify customer and transaction details.

• Check Payment Gateway transaction status.

• Determine whether the charge is completed, pending, failed, or duplicated.

• Apply the relevant refund rule.

• Create or update the refund case.

• Communicate the expected refund SLA.

4. Refund SLA

Standard refunds are targeted for initiation within two business days after eligibility is confirmed. The customer's bank or payment provider may require additional processing time. Support must distinguish NovaCare's refund initiation time from external settlement time.

5. Payment Gateway Timeout

A Payment Gateway timeout is an operational condition, not proof of a failed payment. If a timeout occurs, the support workflow must check transaction reconciliation before retrying or refunding. Repeated gateway timeouts should be associated with the incident-management process.

6. Escalation

Escalate when transaction status remains unresolved after reconciliation, when duplicate charges cannot be explained, when a high-value transaction requires review, or when a customer reports repeated payment failures. See the Escalation Policy and Troubleshooting Guide for the operational path.
