Document Type	Troubleshooting Guide

1. Payment Gateway Timeout

A timeout occurs when the Payment Gateway does not return a timely response. The customer's transaction must be reconciled before a retry or refund is initiated.

• Capture transaction ID, timestamp, customer, product, and amount.

• Check Payment Gateway status.

• Check reconciliation result.

• If captured, avoid creating another charge.

• If failed with no capture, follow the approved retry workflow.

• If unresolved, escalate.

2. Refund Delay

If a customer reports a refund delay, verify refund eligibility, refund initiation timestamp, transaction reference, and current refund status. Do not treat a bank processing delay as a NovaCare processing failure without evidence.

3. Login Failure

For login failures, verify account state and Authentication Service availability. If multiple unrelated customers report login failures at the same time, classify the pattern as a potential incident rather than isolated account problems.

4. Subscription Mismatch

When payment is completed but entitlement is missing, compare Payment Gateway capture status with Subscription Service state. Record both states and escalate if synchronization does not recover within the operational SLA.

5. Duplicate Payment

Verify whether multiple completed transactions exist. Do not infer duplication from multiple authorization attempts alone. Use transaction IDs and settlement information.

6. Escalation Rule

Repeated failures across customers, unresolved payment state, security concerns, and suspected service outages require escalation. Link the ticket to the relevant incident when one exists.
